Pollinator Habitat Resource Guide

- This guide is a collaborative effort between CSU Extension - Boulder County, Longmont & Boulder Valley Conservation Districts and the Natural Resources Conservation Service.
- Our aim is to provide area residents with up-to-date, research based information on how to best create habitat on their property. Whether you have a small patio garden with a few pots or live on a small acreage property you can provide robust habitat that will support the pollinators in your area.
- Habitat loss is currently one of the major threats to pollinators. Fragmentation (areas of habitat that are broken into small and separate parts) and degradation (poor quality habitat) also play a key role. By *increasing, connecting and improving the quality* of existing habitat we can all work together to create a landscape fabric that supports these important species.
- Some key things to keep in mind are pollinators need *food, water, shelter and space* to thrive. By incorporating appropriate plant species, water sources, areas of cover and providing as much space as possible in your landscape for pollinators, you can have a big impact on the livelihoods of the animals and insects that provide such an important ecosystem service.

If you have questions please feel free to contact us at:
